

Uber Supply Demand Gap — Key Findings

- The most critical supply gap occurs at Night (8 PM–midnight) from Airport to City, with 976 'No Cars Available' requests in that single slot alone (Fig 1.2, Fig 2).
- Driver cancellations are concentrated in Early Morning (490) and Morning (430) — both originating from City to Airport, driven by dead-mileage fear (Fig 1.1, Fig 3).
- Airport pickup point has ~55% higher unfulfilled demand than City, requiring a separate operational strategy for each location (Fig 1.3).

Hourly Demand Trend: City vs. Airport

City → Airport | Early Morning cancellations dominate

Airport → City | Night 'No Cars' crisis peaks at 976

Recommendations to Bridge the Gap

- Implement Rush Hour Surge Pricing for City→Airport trips between 4–9 AM to make early morning rides financially attractive and reduce driver cancellations.
- Deploy a dedicated Airport Night Shift pool (8 PM–1 AM) with guaranteed minimum earnings to address the severe 'No Cars Available' crisis at the Airport.
- Offer a Return-Trip Guarantee: match airport drop-off drivers with a city-bound passenger within 15 mins to eliminate dead-mileage and boost driver confidence.
